Low-Code  
PLATFORM

## Rapidly Deploy Enterprise Applications to Accelerate Mission Results

A global pandemic, significant health disparities, increasing occurrences of natural disasters, complex cyber threats, and rising demands for better citizen services – these are just a few challenges government faces today. However, legacy systems and paper-based processes make it hard for federal agencies to overcome these hurdles. REI Systems delivers low-code solutions that help agencies securely modernize at an accelerated pace.

### SERVICES

Our low-code platforms, paired with our Mindful Modernization® approach, allow us to deploy mission-critical solutions 4-6 times faster than a custom-coded effort. These solutions help our clients balance the requirements of speed, scalability, security, and ease of use, while being cost-effective and easy to maintain. We offer end-to-end low-code lifecycle services that include:

- Strategy
- Customer Experience Design
- Requirements building
- Business process re-engineering
- Custom configuration
- Feedback loops
- Testing and deployment
- Operations and maintenance

### LOW-CODE BENEFITS

- Respond faster to ever-changing requirements
- Leverage agile and DevSecOps processes for greater efficiency
- Increase your automation for enhanced productivity
- Improve your customer experiences
- Decrease your total cost of ownership

### MISSION CRITICAL APPLICATIONS

For the past 10 years, REI has developed mission-critical applications with the Appian Platform. We have consolidated multiple legacy applications and modernized them by automating manual processes. Our applications have significantly improved OCC's compliance reporting and helped the agency respond to regulation changes.

transactions

**25%**  
increase in  
recipient  
applications

### LOW CODE PLATFORMS AT OPIC

REI has implemented multiple low-code platforms at this agency. We have a proven track record of consolidating and modernizing multiple legacy applications in a very brief period. Our application streamlined the intake process and highly reduced the administrative burden with a **96% satisfaction rate** with Insight's data transparency. This led to decreased IT expenditures and improved service delivery.

U.S. Department of Transportation  
Federal Railroad Administration

### HUMAN CENTERED DESIGN APPROACH

The REI team successfully planned, designed, and developed a new financial management system to track FRA's budget and spend plan. We used human-centered design focusing on FRA end users and developed using the Application Delivery Framework (ADF). The application automated large and complex spreadsheets and advanced reporting capabilities for users to create custom reports.
