

Just Focus on the Grants

State, local, and non-profit grant-making organizations face many more challenges today than they did just a decade ago. Grant programs are expected to increase grants and awards, track those grants, report out more data about those grants, reduce risks, combat fraud, comply with government regulations and do all of this with smaller budgets and staff. Many grant programs operate with manual processes or legacy systems that cause additional problems. To address these challenges head-on, REI offers an effective low-code grant solution called GovGrants® that addresses these challenges so grant managers can just focus on grants.

GovGrants®, a turnkey Software-as-a-Service (SaaS) solution can manage the full lifecycle of a federal government grant program. Accessible through any device, anywhere, GovGrants® provides a highly intuitive user interface for an excellent user experience. GovGrants® offers a fully automated grants system that is delivered when and as needed. Our solution also integrates with financial enterprise resource planning systems.

CAPABILITIES

AS A GRANTEE

- Planning Module
- Opportunity Module
- Application Module
- Grant Setup Module
- Award Management Module
- Progress Reporting Module
- Closeout Module
- Audit Module
- Analytics Module

AS A GRANTOR

- Planning (Setup) Module
- Announcement Module
- Application Module
- Application Review Module
- Award Module
- Award Mgmt (Monitoring) Module
- Site Visit & Progress Reporting Module
- Payment Requests Module
- Closeout Module
- Audit Module
- Analytics Module

FOR SUB-RECIPIENTS

- Registration Module
- Opportunity Module
- Application Module
- Award Management Module
- Progress Reporting Module
- Closeout Module

BENEFITS

- **Cost Effective.** Offered on a subscription basis—no hardware, software, or platform upgrade costs.
- **Highly Configurable.** Tailored to your unique agency grant business processes and configurable by anyone.
- **Automation Driven.** Built on a robust automated workflow, notification, and approval engine that reduces manual processes, increases compliance, and improves accountability.
- **Data and Reporting Centric.** Provides agencies powerful business intelligence and reporting capabilities that demonstrate overall program performance.

MISSION IMPACT

Utah State Board of Education (USBE)

The USBE provides programmatic and fiscal grant support across the State of Utah. USBE managed \$4.5B in grants on 40+ error-prone spreadsheets. The system was fraught with overpayments, non-compliance, and a lack of transparency. GovGrants automated the entire lifecycle which optimized USBE's labor and payment operations, increased visibility and accountability, reduced waste and risk, and increased productivity by 35%.

San Diego's Economic Development Department (EDD)

The EDD fosters community revitalization and economic opportunity to ensure a high quality of life for residents. It managed a \$10M paper-based block grant program that was troubled with a lack of tracking, reporting and performance, collaboration and information sharing, and errors. Within two months GovGrants was implemented and dramatically improve the user experience, increased recipient applications by 30%, and reduced errors and noncompliance by 25% and reduced labor hours significantly.

Legal Services Corporation (LSC)

LSC, a congressionally funded nonprofit, provides grants for civil legal aid for low-income Americans with the mission of promoting equal access to justice. They distribute around \$420M of grants a year. Their grants were managed by five different systems and many processes were manual with no financial system integrations. LSC also had no centralized reporting ability, and the customer experience was poor. In four months, GovGrants centralized and automated all grant and financial operations. LSC was able to ramp up two new grant programs in three weeks. Application times were reduced by 80% and application reviews when from weeks to days.
