

From Code to Cloud in Clicks

Accelerate Application Delivery with Secure DevSecOps Platform

VistaOps® is REI Systems’ secure, ready-to-use software development platform that helps federal agencies build and launch applications faster and more efficiently. Backed by decades of government IT experience, it cuts costs by combining essential tools into one solution and ensures security is built in from the start.

VistaOps® Benefits

Agencies are under intense pressure to modernize and deliver secure software quickly, yet many are slowed by fragmented systems, manual processes, and lengthy application onboarding. VistaOps was built to overcome those barriers—integrating security by design, simplifying DevSecOps pipelines, and automating deployments.

Accelerates deployments from months to days using automation.

Built-in security & compliance from code to production.

Multi-cloud support, optimized for **AWS GovCloud** and **Azure Cloud**.

Cost-effective and scalable – flexible pricing for adoption.

3352-002

VistaOps® has been accepted as “awardable” on the Department of Defense Platform One (P1) Solutions

Cloud-Native. Modular. Mission-Ready

VistaOps streamlines application development with a flexible, cloud-native DevSecOps platform—ready to deploy on Day 1. It comes fully equipped with pre-integrated Continuous Integration/Continuous Development (CI/CD) pipelines, Infrastructure-as-Code (IaC), embedded security, and monitoring tools—eliminating the time and complexity of manual setup. The result? Faster onboarding, shorter delivery cycles, and improved compliance at enterprise scale.

CAPABILITIES

1. Single-Click Infrastructure as Code (IaC) Deployment
2. Kubernetes-Native Architecture
3. GitOps-Based Continuous Deployment with ArgoCD
4. Security-Embedded DevSecOps Pipeline
5. Multi-Cloud & DoD Platform One Integration

Potential Impact of the Solution

REI developed VistaOps using our experience with USCIS Electronic Immigration system (ELIS). This includes:

- 225+ yearly production updates
- 15+ cloud environments
- 30+ RDS instances, 400+ EC2s
- 100+ CI/CD pipelines, 100+ microservices
