

Two Proven Solutions. One Faster Path to Award.

REI Systems Solutions Available Through the Tradewinds Solutions Marketplace

All Federal departments and agencies can now access two REI Systems solutions through the CDAO Tradewinds Solutions Marketplace: **GovOrch™ AI**, an awardable agentic AI data orchestration solution, and REI's **Federal Assistance Management Platform**, available through the Tradewinds SBIR/STTR Aisle.

The Acquisition Easy Button

The Tradewinds Solutions Marketplace is a repository of post-competition, readily awardable AI, digital, and data solutions designed to support a **rapid acquisition pathway**. Rather than beginning a new, lengthy procurement process, mission owners can identify an REI solution on the Marketplace, align it to their requirements, and work with their contracting organization to pursue an award.

Why Start Through Tradewinds?

Traditional path (9-18+ months)

Mission need → market research → solicitation → proposal period → evaluation → selection → award

Tradewinds path (average 45 days)

Mission need → select a previously evaluated solution → confirm scope and price → contracting action → award

REDUCE PROCUREMENT FRICTION:

- **Competition has already occurred.** Marketplace solutions have completed a government evaluation or qualify through a previously completed competitive process.
- **Start with a validated solution.** Stakeholders can review concise solution videos before beginning acquisition planning.
- **Avoid restarting the acquisition process.** The previous competitive evaluation may be used to support a streamlined award pathway, subject to the contracting officer's determination.
- **Get acquisition support.** The Tradewinds acquisition support team can assist government customers and contracting personnel with the purchasing process.

UNLOCK DATA INTEROPERABILITY WITH AGENTIC AI

GovOrch™ AI is REI Systems' open, agentic AI-powered data orchestration platform designed to solve one of government's most persistent challenges: insufficient data interoperability. Instead of centralizing data, GovOrch™ AI **connects to data where it already lives**, automatically discovering datasets, building pipelines, and delivering insights through natural language queries in minutes, not weeks.

The result: faster, cross-program decisions on funding, oversight, and risk; lower data engineering costs; and a clearer view across programs.

TRADEWINDS STATUS

Awardable through the CDAO Tradewinds Solutions Marketplace. Government users can search for: *"DoW GovOrch™ AI – An Agentic AI-powered Data Orchestrator"*

Federal Assistance Management Platform

MODERNIZE THE FULL FEDERAL ASSISTANCE LIFECYCLE

REI Systems' **Federal Assistance Management Platform** is a secure, cloud-native solution for managing grants, cooperative agreements, SBIR/STTR programs, and other federal assistance activities. The platform powers the Department of War's SBIR/STTR Innovation Portal and supports users across DoW components. **It connects more than 50,000 small businesses** with innovation opportunities while improving program oversight, compliance, transparency, and reporting. It is authorized at FedRAMP High and Impact Level 4.

TRADEWINDS STATUS

Available through the Tradewinds SBIR/STTR Aisle as a Phase III-eligible, previously competed solution. Government users can search for: *"REI's Federal Assistance Management 9-25-1107"*

Solutions in the SBIR/STTR Aisle have already completed a competitive, merit-based evaluation and may be viewed, selected, and awarded by DoW organizations without further competition under the applicable SBIR/STTR Phase III authority.

A Clear Path Forward
